000-256

QUESTION 1:

A developer wants to test an application with the default WebSphere Test Environment. The application uses Message driven Beans and JMS API. In order to test the application successfully, what does the developer need to do, if anything?

A. Connect to the integrated Server using the admin console and enable the messaging engine.
B. Install WebSphere MQ on the machine and configure the Test Environment resources to point to the external JMS server since the Test Environment does not support the messaging engine.
C. Install the Embedded Messaging feature
D. Do no extra configuration, because the integrated Server environment comes with the messaging engine enabled.

Answer: A

QUESTION 2:

Which TWO of the following artifacts will be included in an Application Client JAR?

A. Deployment descriptor
B. EJBs
C. Java classes
D. Servlets

Answer: A,C

QUESTION 3:

Which of the following statements is TRUE with respect to an Enhanced EAR?

A. It is part of the J2EE 1.4 specification
B. It is a combination of multiple enterprise applications
C. It simplifies the deployment
D. It is available only in Rational Application Developer V6 Test Environment

Answer: C

QUESTION 4:

A developer needs to test an application in the WebSphere Test Environment. If the application needs a JDBC data source, which TWO of the following configuration steps are always required?

A. Create a JDBC Provider
B. Specify the isolation policy
C. Specify the database name
D. Specify the minimum pool size.

Answer: A,C,

QUESTION 5:

A tester launches a Profile run configuration against a local executable Java class, receiving a message saying "Connection failed on localhost". The Agent Controller is installed. A possible cause for the error is that:

A. The network adapter on the localhost is disabled.
B. The Profile run configuration is configured to deny access to localhost.
C. The Agent Controller is configured to deny access to localhost
D. Local profiling was not specified in the Profile run configuration.

Answer: C

QUESTION 6:

An application that includes several message-driven beans is imported via Project Interchange. What if anything must be done before testing?

A. Configure JMS resources through the Deployment tab of the WebSphere enhanced EAR editor.
B. Open the server admin console and configure JMS resources
C. Deploy the JMS configuration and add it to the application.
D. Do nothing because the correct configuration is set up when the application is imported.

Answer: B

QUESTION 7:

A developer had configured and successfully tested WebSphere Test Environment to monitor TCP/IP traffic between the browser and the test server using the default ports and values. After restarting, the browser shows the message "The page cannot be displayed". What is the probable reason for this?

A. After each restart, the TCP/IP monitor must be reconfigured
B. The "Show the TCP/IP Monitor view when there is activity" box be selected in TCP/IP Monitor setup screen.
C. The TCP/IP Monitor needs to be restarted after restart.

D. The incorrect port number was used (9080 instead of 9081) in the URL at the time the application was invoked.

Answer: C

QUESTION 8:

If a developer is using the Web service wizard to create a WS-I Complaint Web service from a JavaBean, which of the following options needs to be selected?

A. RPC/Literal
B. RPC/Encoded
