

# 1Y0-A23

## Citrix

### *XenApp 5 for Windows Server 2003: Administration*

*OfficialCerts.com is a reputable IT certification examination guide, study guides and audio exam provider. We ensure that you pass your 1Y0-A23 exam in first attempt and also get high scores to acquire Citrix certification.*

*If you use OfficialCerts 1Y0-A23 Certification questions and answers, you will experience actual 1Y0-A23 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Citrix exam prep covers over 95% of the questions and answers that may be appeared in your 1Y0-A23 exam. Every point from pass4sure 1Y0-A23 PDF, 1Y0-A23 review will help you take Citrix 1Y0-A23 exam much easier and become Citrix certified.*

*Here's what you can expect from the OfficialCerts Citrix 1Y0-A23 course:*

- \* Up-to-Date Citrix 1Y0-A23 questions as experienced in the real exam.*
- \* 100% correct Citrix 1Y0-A23 answers you simply can't find in other 1Y0-A23 courses.*
- \* All of our tests are easy to download. Your file will be saved as a 1Y0-A23 PDF.*
- \* Citrix 1Y0-A23 brain dump free content featuring the real 1Y0-A23 test questions.*

*Citrix 1Y0-A23 certification exam is of core importance both in your Professional life and Citrix certification path. With Citrix certification you can get a good job easily in the market and get on your path for success. Professionals who passed Citrix 1Y0-A23 exam training are an absolute favorite in the industry. You will pass Citrix 1Y0-A23 certification test and career opportunities will be open for you.*

<b>Exam Name:</b>	<b>XenApp 5 for Windows Server 2003: Administration</b>		
<b>Exam Type:</b>	<b>Citrix</b>	<b>Exam Code:</b>	<b>1Y0-A23</b>
<b>Certification</b>	<b>Administrator 4.5 Citrix Certified (CCA 4.5)</b>	<b>Total Questions:</b>	<b>88</b>

**Question: 1**

Which of the following does a data collector not do?

- A. Hosts an in-memory database with dynamic information about servers in the zone
- B. Receives incremental data updates and queries from servers within the zone
- C. Communicates server information to other data collectors in the farm
- D. Hosts applications that are deemed to be of critical importance for the zone

**Answer: D**

**Explanation:**

A data collector is a server that hosts an in-memory database that maintains dynamic information about the servers in the zone, such as server loads, session status, published applications, users connected, and license usage. Data collectors receive incremental data updates and queries from servers within the zone. Data collectors relay information to all other data collectors in the farm. By default, the first server in the farm functions as the data collector. By default, the data collector is configured on the first farm server during the Create Farm Setup and all other servers are configured with equal rights to become the data collector if the data collector fails. The data collector is an infrastructure server and applications are typically not published on it. **Question: 2**

When a zone's data collector fails, what is the process to fix on a new data collector?

- A. Data election occurs and another server takes over the data collector functionality
- B. A failover data collector that has already been designated takes over as the main data collector
- C. The administrator creates a new data collector and installs the necessary data from backup
- D. The administrators determine which of the remaining servers has the least load and elect that to be the new data collector

**Answer: A**

**Explanation:**

When the zone's data collector fails, a data collector election occurs and another server takes over the data collector functionality. Farms determine the data collector based on the election preferences set for a server. **Question: 3**

What is the XenApp data store? (Choose 2)

- A. When new servers come online in a farm, they access it for configuration and administration information

<b>Exam Name:</b>	<b>XenApp 5 for Windows Server 2003: Administration</b>		
<b>Exam Type:</b>	<b>Citrix</b>	<b>Exam Code:</b>	<b>1Y0-A23</b>
<b>Certification</b>	<b>Administrator 4.5 Citrix Certified (CCA 4.5)</b>	<b>Total Questions:</b>	<b>88</b>

- B. The database that decides which server in the environment gets which application
- C. It is a repository of persistent information
- D. It is a repository of dynamic information

**Answer: A,C**

**Explanation:**

When you deploy your server farm, it must have an associated data store. When servers in a farm come online, they query the data store for configuration information. The data store provides a repository of persistent information, including: Farm configuration information, Published application configurations, Server configurations, Citrix administrator accounts, Printer configurations. **Question: 4**

The default database type for the XenApp farm data store is \_\_\_\_? \_\_\_\_

- A. Microsoft SQL
- B. Oracle
- C. IBM DB2
- D. Microsoft Access

**Answer: D**

**Explanation:**

**Question: 5**

You are planning the requirements for a farm size of 500 workstations, 500 applications and 3000 named users. The farm will be spread across 5 zones of 100 workstations each. Which of these are optimal for this farm?

- A. One dedicated infrastructure server, Microsoft SQL for the data store, a dedicated data collector per zone.
- B. Two or more dedicated infrastructure servers that also act as data collectors, SQL Server Express for the data store.
- C. Five infrastructure servers (one per zone) that also act as data collectors, SQL Server Express for the data store.
- D. Two or more dedicated infrastructure servers, Microsoft SQL for the data store, a dedicated data collector per zone.

**Answer: D**

**Explanation:**

Microsoft SQL is necessary as a true client-server DBMS for what is obviously a large farm. Although the documentation calls for minimal number of data collectors (so that network traffic is minimized), dedicated collectors per zone will ensure information consistency across a large

farm. Two or more dedicated infrastructure servers are necessary based on CPU and memory usage, and on the other performance parameters listed - ResolutionWorkItemQueueReadyCount , WorkItemQueueReadyCount , LastRecordedLicenseCheck - OutResponseTime . **Question: 6**

You manage an enterprise farm with several remote sites that are connected across a WAN. Administrators from remote sites have been complaining of data store locks for extended periods of time while performing routine farm maintenance. Which of the following measures can mitigate this issue?

- A. Place replicated data stores in remote sites
- B. Limit routine maintenance from remote sites - only critical jobs should be done remotely
- C. Monitor the number of data reads per minute on the data store, and increase memory in the data store as necessary
- D. Talk to the network administrator about bandwidth issues that may be a bottleneck for traffic

**Answer: A**

**Explanation:**

In a WAN environment, place replicas of the data store at sites with a large number of servers; this minimizes reads across the WAN link. Database replication consumes bandwidth. Limit the use of replicated databases to configurations where the remote site has enough servers to justify the bandwidth cost of placing a replicated copy of the database at the site. For SQL Server, you must use immediate updating transactional replication. Crossing high latency links without using replicated databases can create situations where the data store is locked for extended periods of time when performing farm maintenance from remote sites. Data store reads do not adversely affect local connections but remote sites can experience slower performance. This means that the Citrix IMA Service may start after extended periods of time and some normal operations may fail when initiated from the remote site. Source: Citrix Product Documentation Library/ XenApp / XenApp 5 Feature Pack 2 for Windows Server 2003/Planning Your XenApp Deployment/Planning Infrastructure Servers/Planning the XenApp Data Store/Replication Considerations;

**Question: 7**

What is the biggest factor in determining if servers should be put in their own zone?

- A. Geography
- B. Latency
- C. Number of servers at the location
- D. Number of servers at the nearest big location

**Answer: B**

## OfficialCerts.com Certification Exam Full Version Features;

- Verified answers researched by industry experts.
- Exams **updated** on regular basis.
- Questions, Answers are downloadable in **PDF** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
