70-669

Microsoft

TS: Windows Server 2008 R2, Desktop Virtualization

OfficialCerts.com is a reputable IT certification examination guide, study guides and audio exam provider. We ensure that you pass your 70-669 exam in first attempt and also get high scores to acquire Microsoft certification.

If you use OfficialCerts 70-669 Certification questions and answers, you will experience actual 70-669 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Microsoft exam prep covers over 95% of the questions and answers that may be appeared in your 70-669 exam. Every point from pass4sure 70-669 PDF, 70-669 review will help you take Microsoft 70-669 exam much easier and become Microsoft certified.

Here's what you can expect from the OfficialCerts Microsoft 70-669 course:

** Up-to-Date Microsoft 70-669 questions as experienced in the real exam.*
** 100% correct Microsoft 70-669 answers you simply can't find in other 70-669 courses.*
** All of our tests are easy to download. Your file will be saved as a 70-669 PDF.*
** Microsoft 70-669 brain dump free content featuring the real 70-669 test questions.*

Microsoft 70-669 certification exam is of core importance both in your Professional life and Microsoft certification path. With Microsoft certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-669 exam training are an absolute favorite in the industry.
You will pass Microsoft 70-669 certification test and career opportunities will be open for you.

QUESTION: 1
All Client computers in your company run Windows 7 Enterprise. Users run Windows XP Mode guest virtual machines (VMs) on their computers. Each client computer runs two guest VMs. Each guest VM requires network connectivity to the other guest VM on the host computer, but most not have network connecticity to the host computer operating system or to the internet You need to configure each guest VM to meet the requirements. What should you do?

A. Set each VM network adapter to Not connected.
B. Configure each VM to use one Internal Network network adapter.
C. Configure each VM to use one Shared Networking (NAT) network adapter.
D. Disable Integration Features for each VM. Configure Windows Firewall to allow incoming ICMP traffic, and remove all other Windows Firewall exceptions

Answer: B

Explanation:
- Shared Networking (NAT) refers to a virtual NAT (Network Address Translation) which allows the VM to leverage the external TCP/IP network connected to the host. This is very useful if you regularly move the host computer between different network configurations. NAT is the preferred networking option when there is a shortage of IP addresses, a need to ensure the VM's IP address is not targetable from an external network, or a need for connecting using WWAN.
- In contrast, Bridge mode uses the network adapter on the host. This option appears in the drop down menu as the name of the adapter. The VM is connected directly to the selected network connection of the Windows 7 host, and will behave like a separate physical computer on the same network. If the host has a wireless adapter, its name will appear in the dropdown list. In Bridge mode, Virtual Machine Network Services driver helps redirect the incoming network traffic to the correct VM and associate the correct MAC address in all outbound network traffic. In scenarios using VPN, Bridge mode is the preferred option.
- Choosing the option 'Not connected' disables the VM's networking ability and completely isolates it from the network.
- 'Internal Network' option enables networking among only the VMs on the single Windows 7 host.

QUESTION: 2
Your company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 7. You are deploying Microsoft Enterprise Desktop Virtualization (MED-V) virtual machines (VMs) on several client computers. You need to ensure that names of the new VMs follow a naming convention.

What should you do?

A. In the MED-V Management console, configure the Image Update Settings.
B. In the MED-V Management console, add a script action and set the VM computer name pattern.
C. In the VM, configure the Identification String option by using the Setup Manager Wizard.
D. In the VM, run the System Preparation Tool (Sysprep) and choose to start the factory session after rebooting.

Answer: B

Explanation:
http://technet.microsoft.com/en-us/library/ff433616.aspx

QUESTION: 3
Your company has an Active Directory Domain Services (AD DS) domain. All servers run Windows Server 2008 R2. All client computers run Windows 7. You use Microsoft Enterprise Desktop Virtualization (MED-V) to support client virtualization requirements. You need to ensure that all MED-V virtual machine (VM) images can be centrally stored and are available to all client computers.
What should you do?

A. Install and configure IIS on a member server.
B. Configure a shared folder on a member server.
C. Create a visible workspace for client computers.
D. Install and configure Microsoft SQL Server on a member server.

Answer: A

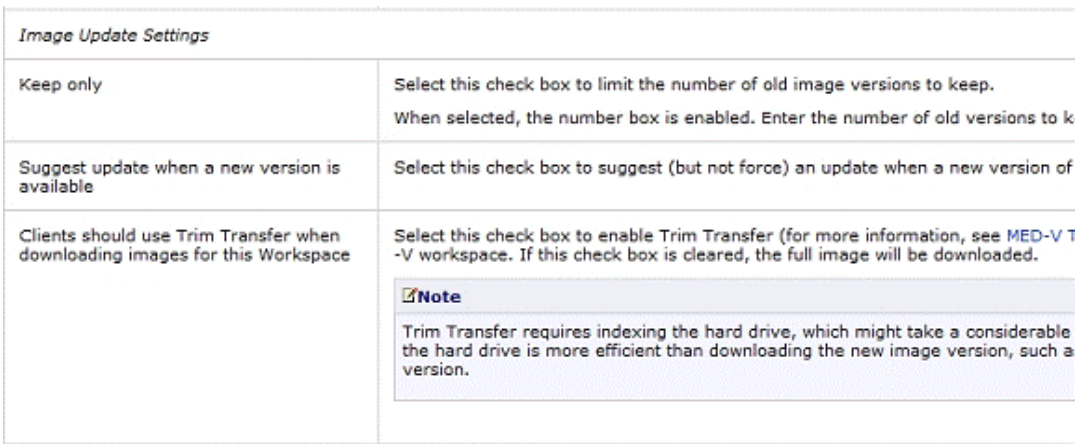
Explanation:
An image repository is an optional server that is used for image distribution (where administrators upload new images and client computers check the server every 15 minutes and update their image if a new one is available). An image distribution server requires the following: Internet Information Services (IIS) During the IIS installation, when adding role services, select the following supported authentication methods: When configuring IIS, include the following:
- .ckm (application/octet-stream)
- .index (application/octet-stream)
http://technet.microsoft.com/en-us/library/ff433547.aspx

QUESTION: 4
Your company has an Active Directory Domain Services (AD DS) domain. All servers run Windows Server 2008 R2. All client computers run Windows 7. Your environment includes Microsoft Enterprise Desktop Virtualization (MED-V). You update the MED-V Workspace virtual machines (VMs) several times and notice that the server is running out of disk space. You need to configure the Workspace to minimize the disk space requirements. What should you do?

A. Configure the Workspace as revertible.
B. Set an expiration date for the Workspace.
C. Specify the number of image versions to keep.
D. Specify that clients should use the Trim Transfer when downloading the images.

Answer: D

Explanation:



http://technet.microsoft.com/en-us/library/ff433598.aspx

QUESTION: 5
Your organization has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 7. You need to create a single distribution file containing Windows Virtual PC and a virtual machine image that will be deployed to all the client computers. What should you use?

A. Microsoft Deployment Toolkit (MDT) 2010
B. Deployment Images Servicing and Management (DISM)

C. Microsoft Enterprise Desktop Virtualization (MED-V) Packaging Wizard
D. Microsoft System Center Virtual Machine Manager (VMM) 2008 R2 with a template

Answer: C

QUESTION: 6
Your company has an Active Directory Domain Services (AD DS) domain. All servers run Windows Server 2008 R2. All client computers run Windows 7. Your environment includes Microsoft Enterprise Desktop Virtualization (MED-V). You are preparing to update a MED-V Workspace that is used by 1000 client computers.
You need to minimize the network impact of updating the workspace. What are the two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Pack the Workspace images.
B. Enable Trim Transfer on the Workspace.
C. Send each virtual machine file storage folder to a compressed (zipped) folder.
D. On each virtual machine file in the Workspace, enable file system compression.

Answer: A, B

Explanation:
http://technet.microsoft.com/en-us/library/ff433545.aspx

QUESTION: 7
All client computers in your company run Windows 7 Enterprise. You are planning to deploy a custom application that runs only on Windows XP to all users. You install Windows XP Mode on each host computers and install the application in the Windows XP guest virtual machines (VMs). You verify that the application runs in the guest VMs. An application shortcut does not appear on the Windows 7 host computers. You need to ensure that the applications can be launched directly from Windows 7 host computers. What should you do in the guest VMs?

A. Repair the application.
B. Upgrade the Virtual PC Integration Components.
C. Copy the application shortcut to the Start menu to All Users.
D. Assign the Full Control permission to the application shortcut to the everyone group.

Answer: C

Explanation:
http://blogs.technet.com/b/windows_vpc/archive/2009/11/02/publishing-virtual-applications-in- windows-virtualpc.aspx

QUESTION: 8
Your organization has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 7. You use Microsoft System Center Virtual Machine Manager (VMM) 2008 R2 to manage your Hyper-V hosts. Your environment includes Microsoft Enterprise Desktop Virtualizaetion (MED-V). You plan to deploy a virtual machine (VM) image to all client computers. You need to ensure that user state information is maintained between sessions in the VM.
What should you do?

A. Use VMM to configure placement settings.
B. Configure MED-V revertible workspace policy.
C. Configure MED-V persistent workspace policy.
D. Use Hyper-V Manager to create a revert snapshot.

Answer: C

Explanation:
The following MED-V workspace types are available:
Persistent—In a persistent MED-V workspace, all changes and additions the user makes to the MED-V workspace are saved in the MED-V workspace between sessions. Additionally, a persistent MED-V workspace is generally used in a domain environment.
Revertible—In a revertible MED-V workspace, at the completion of each session (that is, when the MED-V workspace is stopped), the MED-V workspace reverts to its original state during deployment. No changes or additions that the user made are saved on the MED-V workspace between sessions. A revertible MED-V workspace cannot be used in a domain environment. http://technet.microsoft.com/en-us/library/ff433566.aspx

QUESTION: 9
Your company has an Active Directory Domain Services (AD DS) domain. All servers run Windows Server 2008 R2. All client computers run Windows 7. You use Microsoft Enterprise Desktop Virtualization (MED-V). You need to prepare the MED-V server for cluster mode. What should you do?

PASS4SURE Officialcerts.com

OfficialCerts.com Certification Exam Full Version Features;

- Verified answers researched by industry experts.
- Exams **updated** on regular basis.
- Questions, Answers are downloadable in **PDF** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success ***Guarantee***.
- **Fast**, helpful support 24x7.
