**Question: 1**

Which of the following describes a disadvantage of using the dimensionally modeled relational (DMR) technique to access a normalized data structure?

- A. Does not allow access to all relational items in Query and Report Studio
- B. May increase the time needed to fetch required data
- C. Does not allow access to member functions
- D. May bypass aggregate aware tables

**Answer: B**

**Question: 2**

Which of the following requires additional configuration for installing Cognos 8 BI in a development and production environment?

- A. The application in the development environment and in the production environment will use the Tomcat servlet container as the application server.
- B. The development environment will include workstations hosting Framework Manager and Cognos 8 OLAP Modeling, while the production environment will not.
- C. The environment contains customized port and firewall settings for the default http and application server port.
- D. The development and production environment will use data sources that are in Unicode.

**Answer: C**

**Question: 3**

Which Cognos 8 BI architectural component is written in C++?

- A. Batch report service
- B. Job service
- C. Monitoring service
- D. Presentation service

**Answer: A**

**Question: 4**

Which of the following describes the benefits of Cognos Application Firewall (CAF)?

- A. It protects the application by monitoring all HTTP requests sent through the Web server to ensure the gateway is receiving valid requests.
- B. It allows Cognos 8 BI to run over the Internet.
- C. It monitors and validates all input requests to prevent parameter manipulation, SQL injection, and buffer overflow.
- D. It encrypts all input requests for validation before they are sent to the dispatcher.

**Answer: C**

**Question: 5**

A multi-server installation of Cognos 8 BI must be performed. Which of the following is a valid strategy for installing across multiple servers?

- A. Separate the gateway component from other server components to restrict report request processing to the Web server tier.
- B. Enable dedicated request processing, by installing a dispatcher in the Web server tier to act as a primary dispatcher for routing requests to other dispatchers.
