- A. IPX/SPX
- B. ICMP
- C. TCP/IP
- D. VoIP

Answer: C

QUESTION: 3

Margie, the Senior Consultant, has been asked to conduct a site review on a customer Microsoft Axapta installation. Margie finds several issues in regard to a lack of redundancy in the current infrastructure. Given the following description of the customer network, in what units should the customer invest in order to have the highest availability and still keep the cost at a minimum Infrastructure description: All servers are dedicated to perform one task, all servers are equipped with 100 Mbps Network Interface Cards (NIC), and all servers are connected to a 100 Mbps switch. All servers are located on the same subnet. All Microsoft Axapta clients run in 3-tier thin mode.

- A. One extra NIC in all AOS servers
- B. One extra NIC in all servers, except AOS servers
- C. An additional switch
- D. Two additional switches

Answer: B, C

QUESTION: 4

During the installation of Microsoft Axapta Server V.3.0, what are the minimum software

requirements?

- A. Internet Information Server v 4.0 or higher
- B. Microsoft Office XP or higher
- C. Internet Explorer v 5.0 or higher
- D. Windows NT 4.0 Server

Answer: C

QUESTION: 5

Your company has required two new servers. These servers are to be used to run Microsoft Axapta Object Servers. You are asked, as your company Microsoft Axapta Object Server professional, to make a Servers.decision on which RAID subsystem they should implement in the two servers. Taking into consideration performance and cost, please choose the best of the below options.

- A. Raid 5
- B. Raid 0+1
- C. Raid 1
- D. Raid 0

Answer: C

QUESTION: 6

When using Microsoft Axapta, what is the recommended network library to use with Microsoft SQL server?

- A. TCP/IP
- B. NWlink IPX/SPX
- C. Named Pipes
- D. Multi-protocol

Answer: A

QUESTION: 7

Simon, the System Implementer, is preparing to create a new Microsoft SQL Server database to use with Microsoft Axapta. Which option represents how Simon should configure the primary data file and transaction logs?

- A. Place them on the same disk and as small as possible to conserve disk space.
- B. Place them on different disk sets with data sized to hold at least one year worth of data.
- C. Place them on the same disk using the default size provided by Microsoft SQL Server.
- D. Place them on the same disk with the same sizes.

Answer: B

QUESTION: 8

Which of the following letter combinations should always be a part of the Microsoft SQL Server collation set for the Microsoft Axapta database?

- A. Accent Insensitive (AI)
- B. Case Insensitive (CI)
- C. Case Sensitive (CS)
- D. Kana Sensitive (KS).

Answer: B

QUESTION: 9

- A. System Administrator
- B. Security Administrator
- C. No server roles, only database roles
- D. Process Administrator.

Answer: C

QUESTION: 10

When does Microsoft Axapta create the system tables?

- A. They are only created on the first connection at application startup.
- B. They are re-created on every new connection at application startup.
- C. They are created at synchronization time or at application startup, if not found in the database.
- D. The Microsoft Axapta system tables are automatically created when creating the database.

Answer: C

QUESTION: 11

Where can you specify a location for the error log file used by Microsoft Axapta?

- A. The Tools/options menu
- B. The Axapta configuration utility
- C. The SQL Administration form
- D. The database log form.

Answer: B

QUESTION: 12

A new user is reading about the installation of Microsoft Axapta in a 2-tier environment. The user wants to be sure they understand which parts of Microsoft Axapta are required for the 2-tier installation. They contact Simon, the System Implementer, to help clarify what is required. What

does Simon tell them are the Microsoft Axapta components required for the 2-tier installation?

- A. Application
- B. System DSN
- C. Axapta Object Server
- D. Client

Answer: A, D

QUESTION: 13

After installation of the Microsoft Axapta Active Directory schema extensions, Simon, the System Implementer, needs to make the necessary changes to the current Microsoft Axapta installation to migrate from a standard 3-tier thin client environment to an Active directory integrated environment. Where does Simon need to make the necessary configuration changes?

- A. To both the setting of all relevant AOS instances and to the Microsoft Axapta 3.0 client configuration.
- B. Only to the setting of all relevant AOS instances.
- C. Only to the Microsoft Axapta 3.0 client configuration.
- D. No changes are necessary. The only requirement is the installation of the Active Directory schema extensions.

Answer: A

QUESTION: 14

In a 3-tier environment with separate database, file, and two AOS servers, the two AOS servers are running one instance each, and together they form an AOS cluster. There is a combination of Rich and Thin clients. The "CacheLookup" properties are set to "EntireTable" on the ZipCode table. All clients access the ZipCode table when they start up. Where will the table cache be located for the 3-tier rich clients and for the 3-tier thin clients?

- A. 3-tier rich clients will hold a private cache of records used by the client. AOS will maintain a complete cache of all records available in the zip code table.
- B. 3-tier thin clients will hold a private cache of records used by the client. AOS will maintain a complete cache of all records available in the zip code table.
- C. 3-tier thin clients maintain a complete cache of all records available in the zip code table. The AOS instance does not hold any cache for 3-tier thin clients.
- D. 3-tier rich clients maintain a complete cache of all records available in the zip code table. The AOS instance does not hold any cache for 3-tier rich clients.

Answer: B, D

QUESTION: 15

Margie, the Senior Consultant, has been contacted by a customer who needs help integrating their current Microsoft Axapta installation into Active Directory. All Microsoft Axapta clients are
