

250-422

Symantec

Design & Custom. Of HA Solutions for UNIX using VCS 4.1

Visit: <http://www.pass4sureofficial.com/exams.asp?examcode=250-422>

Pass4sureofficial.com is a reputable IT certification examination guide, study guides and audio exam provider, we not only ensure that you pass your 250-422 exam in first attempt, but also you can get a high score to acquire Symantec certification.

If you use pass4sureofficial 250-422 Certification questions and answers, you will experience actual 250-422 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Symantec exam prep covers over 95% of the questions and answers that may be appeared in your 250-422 exam. Every point from pass4sure 250-422 PDF, 250-422 review will help you take Symantec 250-422 exam much easier and become Symantec certified. All the Questions/Answers are taken from real exams.

Here's what you can expect from the Pass4sureOfficial Symantec 250-422 course:

- * Up-to-Date Symantec 250-422 questions taken from the real exam.
- * 100% correct Symantec 250-422 answers you simply can't find in other 250-422 courses.
- * All of our tests are easy to download. Your file will be saved as a 250-422 PDF.
- * Symantec 250-422 brain dump free content featuring the real 250-422 test questions.

Symantec 250-422 certification exam is of core importance both in your Professional life and Symantec certification path. With Symantec certification you can get a good job easily in the market and get on your path for success. Professionals who passed Symantec 250-422 exam training are an absolute favorite in the industry. You will pass Symantec 250-422 certification test and career opportunities will be open for you.

Question: 1

A database needs to be made highly available. There are currently two identical servers ten meters apart that are to be clustered. Which two pieces of additional information are needed in order to determine the high availability requirements? (Choose two.)

- A. The server operating system version
- B. LAN capacity
- C. The database version
- D. The client operating system version
- E. The distance between clients and the server

Answer: A, C

Question: 2

What is recommended for the implementation of a high availability environment?

- A. Redundant hardware on the cluster systems
- B. A minimum of two service IP addresses per host
- C. A minimum of 10 GB of local disk space on each host
- D. An SNMP management application installed on shared storage

Answer: A

Question: 3

What is one disadvantage of using active/active clusters over using passive standby systems in a cluster?

- A. Active/Active clusters risk overloading the systems.
- B. Most applications will not support active/active clustering.
- C. Active/Active clusters increase operational overhead.
- D. Active/Active clusters increase the cost of licensing.

Answer: A

Question: 4

You have three Web servers in production that you want to make highly available. You plan to place all three systems in a single VCS cluster. You have already verified that the three Web servers can coexist on the same system. Each Web server contains only static data so shared storage will not be used. You want to ensure that the systems can be clustered and will support VCS. Which four system configuration items must be verified for VCS supportability? (Choose four.)

- A. The storage requirement of each Web server
- B. The operating system version
- C. The total memory available
- D. The I/O throughput of each system
- E. The amount of free storage

Answer: A, B, C, E

Question: 5

You are implementing a new VCS cluster for a new application that includes a database. Both the application and database have to run on the same server at any given time. The application communicates with the database through proprietary interfaces that use shared memory.

External users only connect to the application and never connect to the database directly. The storage is controlled by VERITAS Storage Foundation. Which four resources must be set to critical in VCS to ensure high availability of the application? (Choose four.)

- A. The application engine
- B. The database engine
- C. The database network listener
- D. The application and database file systems
- E. The application and database disk groups
- F. The application and database volume manager private regions

Answer: A, B, D, E

Question: 6

You are implementing a two-system VCS cluster using existing hardware. Each system has as a single 100 Mbps onboard NIC and no other interfaces. Which three additional server configuration items must you collect to verify server supportability in the cluster? (Choose three.)

- A. The operating system versions supported
- B. The amount of memory
- C. The number of power supplies available
- D. The number of I/O slots available

Answer: A, B, D

Question: 7

Which cluster characteristic can only be implemented with custom scripting?

- A. The application data is stored on different directories depending on the system. VCS must monitor the file systems.
- B. The application uses VERITAS Volume Manager commands to grow volumes for additional data. VCS must monitor these volumes.
- C. The application requires multiple virtual IP addresses. VCS must ensure that these addresses stay online.
- D. The application uses VERITAS Volume Manager commands to create new volumes for data. VCS must monitor these volumes.

Answer: D

Question: 8

There is basic information available about an application environment including the hostname, applications installed, and location of hardware. What else needs to be known in order to configure VERITAS Cluster Server?

- A. The CPU serial number
- B. SCSI paths
- C. Boot disk configuration
- D. Public IP addresses

Answer: D

Question: 9

You are designing a cluster where you must have multiple instances of the same application running simultaneously. Which is true concerning running multiple instances of an application under VCS in terms of startup, shutdown, and monitoring?

- A. Each instance must be dependent on the others.
- B. Each instance must be independent of the others.
- C. VCS does not support running multiple instances of the same application.
- D. Each instance must use the same shared disk.

Answer: B

Question: 10

You are the administrator of a set of three two-node VCS clusters. You have been asked to put together a design for changing this set to a single cluster of six nodes. Which component will need to be replaced if it exists in the current cluster?

- A. SAN-based disks containing application data
- B. Parallel service groups
- C. Host-connected SCSI disks containing application data
- D. I/O fencing

Answer: C

Question: 11

You are designing a high availability solution. Transaction processing is the most important service of this application. Other services are not as important and can be down for short periods of time. Which component is NOT critical to this design?

- A. The application program that processes transactions
- B. The proprietary database used by the application program
- C. The file system that stores transactional data processed by the application
- D. The file system that stores reports generated by users

Answer: D

Question: 12

You currently have two separate locations where each location has access to a common SAN. The existing network configuration uses VLANs to allow for layer 2 LAN heartbeat connectivity between the two sites. However, you need to move away from using VLANs due to company policy. How would this change impact the high availability design using VCS?

- A. The change would have no impact on the HA design at all.
- B. You would need to run LLT over UDP.
- C. You need to use a Replicated Data Cluster.
- D. You could only use IO fencing as the heartbeat connections.

Answer: B

Question: 13

There is a front-end application that should only accept client connections when a back-end database application is available. Both applications are to be made highly available under VCS in the same cluster. Which two ways can this be configured in VCS? (Choose two.)

- A. Configure separate service groups for each application with no dependencies.
- B. Configure separate service groups for each application with a dependency.

Pass4SureOfficial.com Lifetime Membership Features;

- Pass4SureOfficial Lifetime Membership Package includes over **2500** Exams.
- **All** exams Questions and Answers are included in package.
- **All** Audio Guides are included **free** in package.
- **All** Study Guides are included **free** in package.
- **Lifetime** login access.
- Unlimited download, no account expiry, no hidden charges, just one time \$99 payment.
- **Free updates** for Lifetime.
- **Free Download Access** to All new exams added in future.
- Accurate answers with explanations (If applicable).
- Verified answers researched by industry experts.
- Study Material **updated** on regular basis.
- Questions, Answers and Study Guides are downloadable in **PDF** format.
- Audio Exams are downloadable in **MP3** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
