Microsoft
Pro: Windows Server 2008, Enterprise Administrator

Pass4sureofficial.com is a reputable IT certification examination guide, study guides and audio exam provider, we not only ensure that you pass your 70-647 exam in first attempt, but also you can get a high score to acquire Microsoft certification.

If you use pass4sureofficial 70-647 Certification questions and answers, you will experience actual 70-647 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Microsoft exam prep covers over 95% of the questions and answers that may be appeared in your 70-647 exam. Every point from pass4sure 70-647 PDF, 70-647 review will help you take Microsoft 70-647 exam much easier and become Microsoft certified. All the Questions/Answers are taken from real exams.

Here’s what you can expect from the Pass4sureOfficial Microsoft 70-647 course:

* Up-to-Date Microsoft 70-647 questions taken from the real exam.
* 100% correct Microsoft 70-647 answers you simply can’t find in other 70-647 courses.
* All of our tests are easy to download. Your file will be saved as a 70-647 PDF.
* Microsoft 70-647 brain dump free content featuring the real 70-647 test questions.

Microsoft 70-647 certification exam is of core importance both in your Professional life and Microsoft certification path. With Microsoft certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-647 exam training are an absolute favorite in the industry. You will pass Microsoft 70-647 certification test and career opportunities will be open for you.
Question 1
Your network consists of one Active Directory forest named contoso.com. The functional level of the contoso.com forest is Windows Server 2008. The network contains seven servers that run Internet Information Services (IIS) 7.0 and host Web services. Remote users from a partner company access the Web services through HTTPS. The partner company has a separate Active Directory forest named fabrikam.com. The functional level of the fabrikam.com forest is Windows Server 2003. You need to recommend an authentication solution for the fabrikam.com users. The solution must meet the following requirements:

All communications between both forests must use only HTTPS.
Remote users must only authenticate once to access all Web services.
Users from fabrikam.com must access the Web services by using user accounts in the fabrikam.com forest. What should you recommend?

B. Implement Microsoft Identity Lifecycle Manager (ILM) 2007 on the contoso.com forest.
C. Implement a forest trust between the contoso.com and the fabrikam.com forests. Configure the forest trust to use Selective Authentication.
D. Implement Active Directory Federation Services (AD FS) in the contoso.com forest. Create a federation trust between the contoso.com forest and the fabrikam.com forest.

Answer: D

Question 2
Your network consists of one Active Directory domain named contoso.com. The domain contains three Windows Server 2008 servers named Server1, Server2, and Server3. Server1 runs Active Directory Certificate Services (AD CS) and is configured as an enterprise root certification authority. Server2 hosts an internal Web site. Users currently connect to the Web site by using the URL https://server2.contoso.com. You plan to replicate the Web site from Server2 to Server3. You need to recommend a solution to enable users to connect to the Web site through HTTPS on either Server2 or Server3 by using a single URL. The solution must meet the following requirements:

Users must be able to use the https://www.contoso.com URL to connect to the Web site.
Incoming connections must be dynamically balanced between Server2 and Server3.
What should you recommend?

A. Add both servers to a Network Load Balancing cluster. Export the Web server certificate on Server2 to Server3.
D. Add both servers to a failover cluster. Issue a Web server certificate for server2.contoso.com and install the certificate on Server2. Issue a Web server certificate for server3.contoso.com and install the certificate on Server3.

Answer: C

Question 3
Your company has a main office and 10 branch offices. The network consists of one Active Directory domain. All domain controllers run Windows Server 2008 and are located in the main office. You need to plan the deployment of one Windows Server 2008 domain controller in each branch office. The solution must meet the following requirements:
Branch office domain controllers must be able to log users on to the domain.
Branch office domain controllers must be able to store the passwords of only some domain users.
Users must be able to download Group Policy objects (GPOs) from the branch office domain controllers. What should your plan include?

C. Install Active Directory Domain Services (AD DS). Select the read-only domain controller (RODC) option during installation.
D. Install Active Directory Domain Services (AD DS). Create a new Password Settings object (PSO). Link the PSO to user objects in the respective branch office.

Answer: C

Question: 4
Your company has a main office and 100 branch offices. The network consists of one Active Directory domain that contains 10,000 users. You plan to deploy one Windows Server 2008 domain controller in each branch office. You need to recommend a solution to minimize network traffic during the installation of Active Directory Domain Services (AD DS) on each branch office domain controller. What should you recommend?

A. Install AD DS by using the Install from Media feature.
B. Install AD DS and configure the read-only domain controller (RODC) option.
C. Install a Server Core installation of Windows Server 2008, and then install AD DS.
D. Disable the Global Catalog option on each branch office domain controller. Enable Universal Group Membership Caching from each branch office site.

Answer: A

Question: 5
Your network consists of one Active Directory domain that contains only domain controllers that run Windows Server 2003. Your company acquires another company. You need to provide user accounts for the employees of the newly acquired company. The solution must support multiple account lockout policies. What should you do?

A. Implement Authorization Manager.
B. Implement Active Directory Federation Services (AD FS).

Answer: D

Question: 6
Your company has a main office and a branch office. Your network consists of one Active Directory domain. All domain controllers run Windows Server 2008. You need to plan the installation of a new server as a read-only domain controller (RODC) in the branch office. The plan must meet the following requirements:

A branch office user must complete the RODC installation.
The branch office user must only be a member of only the Domain Users security group. What should you do first?
Question: 7
Your network contains one Active Directory forest that has a root domain and three child domains. All domain controllers run Windows Server 2003 Service Pack 1 (SP1). Each domain has a different password policy. The domain is configured as shown in the exhibit. (Click the Exhibit button.) You plan to reduce the number of domains in the forest. You need to plan the restructuring of the forest to meet the following requirements:

Maintain all existing password policies.
Maintain all existing user account attributes.
What should you include in your plan?

A. Upgrade all domains to Windows Server 2008. Redirect the users container in the root domain by using the redirusr.exe tool, and then remove the child domains. Enable fine-grained password policies.
B. Upgrade all domains to Windows Server 2008 and enable SID history. Move all user accounts from the child domains to the root domain by using the movetree.exe tool, and then remove the child domains.
C. Upgrade the forest root domain to Windows Server 2008. Use the Active Directory Migration Tool (ADMT) to migrate user accounts that contain SID history from the child domains to the forest root domain. Remove the child domains.
D. Upgrade the forest root domain to Windows Server 2008. Use the Active Directory Migration Tool (ADMT) to migrate user accounts from the child domains to the forest root domain, and then remove the child domains. Enable fine-grained password policies.

Answer: D

Question: 8
Your company has a main office, three regional offices, and six branch offices. The network links are configured as shown in the exhibit. (Click the Exhibit button.) The network consists of one Active Directory domain. You create an Active Directory site for each office. You create a site link for each wide area network (WAN) link. The Bridge all site links option is disabled. You need to plan the deployment of domain controllers. The solution must meet the following requirements.

Windows PowerShell must be installed on all domain controllers in each regional office. Domain user account passwords stored on the domain controllers must be protected if a branch office domain controller is stolen. What should you do?

A. In each branch office and in each regional office, install a Server Core installation of Windows Server 2008 and configure a writable domain controller.
B. In each branch office and in each regional office, install a full installation of Windows Server 2008 and configure a read-only domain controller (RODC).
C. In each branch office, install a Server Core installation of Windows Server 2008 and configure a read-only domain controller (RODC). In each regional office, install a full installation of Windows Server 2008 and configure a writable domain controller.
D. In each branch office, install a full installation of Windows Server 2008 and configure a read-only domain controller (RODC). In each regional office, install a Server Core installation of Windows Server 2008 and configure a writable domain controller.

Answer: C

Question: 9
Your company has a main office and 10 branch offices. The network consists of one Active Directory domain. All domain controllers run Windows Server 2008 and are located in the main office. Each branch office contains one member server. Branch office administrators in each branch office are assigned the necessary rights to administer only their member servers. You deploy one read-only domain controller (RODC) in each branch office. You need to recommend a
security solution for the branch office Windows Server 2008 domain controllers. The solution must meet the following requirements:

Branch office administrators must be granted rights on their local domain controller only. Branch office administrators must be able to administer the domain controller in their branch office. This includes changing device drivers and running Windows updates. What should you recommend?

A. Add each branch office administrator to the Administrators group of the domain.
B. Add each branch office administrator to the local Administrators group of their respective domain controller.
C. Grant each branch office administrator Full Control permission on their domain controller computer object in Active Directory.
D. Move each branch office domain controller computer object to a new organizational unit (OU). Grant each local administrator Full Control permission on the new OU.

Answer: B

Question: 10
Your company has four offices that are connected by using high speed wide area network (WAN) links. Each office has a router that supports the Simple Certificate Enrollment Protocol (SCEP). The network consists of one Active Directory domain. All domain controllers run Windows Server 2008. You have a Certificate Services infrastructure. The Certificate Services servers run Windows Server 2003 Standard Edition. You plan to enable device authentication for all routers. You need to recommend changes to the Certificate Services infrastructure to support device authentication. Which changes should you recommend?

Answer: D

Question: 11
Your network consists of two Active Directory forests. The Active Directory forests are configured as shown in the following table. The contoso.com and fabrikam.com domains each contain one server that runs Active Directory Federation Services (AD FS). Users in the company1.contoso.com domain require access to an application server in the company2.fabrikam.com domain. The application server is configured to allow only Kerberos authentication. You need to ensure that users in the company1.contoso.com domain can access the application server in the company2.fabrikam.com domain. What should you do first?
Pass4SureOfficial.com Lifetime Membership Features;

- Pass4SureOfficial Lifetime Membership Package includes over 2500 Exams.
- All exams Questions and Answers are included in package.
- All Audio Guides are included free in package.
- All Study Guides are included free in package.
- Lifetime login access.
- Unlimited download, no account expiry, no hidden charges, just one time $99 payment.
- Free updates for Lifetime.
- Free Download Access to All new exams added in future.
- Accurate answers with explanations (If applicable).
- Verified answers researched by industry experts.
- Study Material updated on regular basis.
- Questions, Answers and Study Guides are downloadable in PDF format.
- Audio Exams are downloadable in MP3 format.
- No authorization code required to open exam.
- Portable anywhere.
- 100% success Guarantee.
- Fast, helpful support 24x7.
